

**ED Poland**  
**by Henryk M. Przewłocki**

A Distinguished IEEE EDS Lecture was organized on June 21st 2013, at the Institute of Electron Technology (IET) in Warsaw, Poland. The Distinguished IEEE EDS Lecturer was Prof. Hiroshi Iwai of the Tokyo Institute of Technology (TIT) and the title of the presentation was: "Future of Nano CMOS Technology". The audience of this event, of ca. 40 people, was composed of IET staff and guests from other Polish institutes and from abroad.

Since the group of TIT researchers lead by Prof. Iwai is at the forefront of new developments in nano CMOS technologies, the lecture was a very competent and clear presentation of DL's opinions on further developments in this area during the coming 10-15 years. The audience enjoyed very much the clear and well-motivated opinions of the DL.
